**SUPPLEMENT TO SAWHORSE/WORKBENCH/WALK-UP SCAFFOLD
USER GUIDELINES**

130/140 SERIES PRODUCT:

To clarify the height at which a Plank may be configured with the use of the 130/140 series Sawhorse Product for use as “Ladder Type Scaffold Configuration”.

We recommend the following practice:

The Engineered Plank Wood or Aluminum should be placed no higher than the second tread from the Top Cap of the 130/140 series Sawhorse.

The plank should not be placed on the top of the work bench but can be placed on any step below the top.

We also recommend that the Plank be secured to the Sawhorse ledger point combining both the side-rail of the unit and the tread/ledger point, using a ratchet strap of some variety.

This enables the use of the side-rail as a point of safety from the plank slipping laterally, and better access on and off the Platform or Plank.
